

## APPLICATION FORM

Return **original copy** to: Cesena Fiera S.p.A.  
Via Dismano, 3845 - 47522 Cesena FC - Italy

### ELECTRIC POWER SUPPLY

The Firm ..... Contact person .....

requests to have the electric connection to its booth under the terms and tariffs stated overleaf, which are acknowledged and accepted in all their parts (see the form A). The connection shall have a total power of:

- kw ..... 230 V single-phase (3 kW maximum)
- kw ..... 400 V three-phase (by means of 5 pole socket)

For requests of more than 3 kW a more neutral three-phase connection will be provided. ENEL (the National Electricity aNaBoard) does not assume any responsibility for the systems downstream from the delivery point of supply. Those systems shall be carried out in compliance with the established safety rules.

### RULES AND CONDITIONS CONCERNING THE ELECTRIC POWER SUPPLY

- The Show Management does not assume any responsibility concerning the continuity and uniformity of the electric power supply which depends on the producing and supplying companies.
- The electric power supply is always subject to the technical possibilities of the area where the booth is located. Therefore the Management reserves the right to limit the request for power supply according to the availability.
- In the exhibition pavilion there are some plugs for the connection to the electric system. The connection from these points to the booth will be accomplished by the exhibiting firm at its own expense without causing any damage to the other exhibitors' booths, and by employing the official electricians of the show (they have identification badges) exclusively. The electricians are also entitled to disconnect the connections which, owing to tampering, excessive electrical input, or to any other reason, do not work properly and cause malfunctioning of the power grid.  
  
All electric equipment must be equipped with earth connection; the whole electric system of the booth shall be protected by the installation of a suitably calibrated differential magnetothermal switch to be placed downstream from the exhibition point of supply.
- Connection and supply costs will be invoiced on a lump-sum basis as follows:
  - Electric power for lighting and m.p. € 45,00 per kw or part of it. The above mentioned rates are intended for the duration of the show and during the show working hours.
- The Show Management reserves the right to update the rates owing to any increases applied by the supplying companies between the date of application and that of invoicing.
- For any set up works or various installations in their booths, the exhibitors who do not have their own technicians must apply to the official electricians. The firm responsible for this service shall provide the exhibitors with an estimate which the latter approve of and undertake to pay.
- In case of failure to pay the invoiced amounts, the Show Management is allowed to withhold goods and furnishing materials from the exhibitor's booth as a right of recourse, not granting the approval to leave.
- Any claim regarding the services shall be submitted to the Management. Claims concerning the invoice shall be submitted no later than two days from receiving it. Otherwise the invoiced amount will be considered to be fully accepted.
